Paper Machine Clothing Triple Layer Forming Fabric

Specialize in Paper Machine Clothing, Polyester Mesh Belts manufacturing and solution.

Description

Triple-layer forming fabrics have two independent single-layer fabrics bound together by separated yarns. On the forming side, the yarns have a small diameter to increase the support index. On the wear side, cross-direction yarns have a large diameter to improve the fabric life. The wear side is made with a coarse mesh to improve stability and wear resistance. The paper side is made with very fine yarns on the surface to optimize the sheet forming performance. This modified design delivers enhanced stability in the cross-machine direction thanks to its three-ply weft structure. Furthermore, improved drainage is guaranteed because of its increased three-dimensional space.

Triple Layer Forming Fabric

Feature

- Better support and fixation, while reducing line marks.
- Better drainage performance
- Better stability and abrasion resistance.
- Longer service life

Specialize in Paper Machine Clothing, Polyester Mesh Belts manufacturing and solution.

Application

Triple-layer forming fabric is suitable for producing quality printing paper, tissue paper and cigarette paper, etc. Suitable for the high-speed paper-making machine.

Specifications

Weaving series	Model	Thread Dia.(mm)		Density (No.s/cm)		Air Permeability (m ³ /m ² h)
		Warp	Weft(up/bottom)	Warp	Weft
